

Establishing the links

Günter Neumann
DFKI, Saarbrücken

Brainstorming

- Viewed under a graphical perspective
 - Components, data sources are nodes
 - Links ako interfaces
- What level of granularity?
 - Is QA one node?
 - Is NER one single node?
 - Is the lexicon one component?
- Carefully consider aspect of modularity

Continuing

- Application vs. Application neutral linkage?
 - One stable control flow?
 - Dynamic control flow depending on application?
- Crucial:
 - Automatic (interactive) domain adaptation even in case of control flow
- Needs an architectural framework
 - E.g., Web services
 - But what level of granularity? calling stems? pos?, parsing? ...
