## Introduction

Concept representation is the building block in the knowledge representation.

Figurative language processing demands more naturalistic descriptions (common sense knowledge) to refer concepts.

E.g., metaphor generation, metaphor comprehension.

Do lexicons have enough common sense knowledge?

E.g., In WN, surgeon is "a physician who specializes in surgery".

**Hypernyms:** Surgeon is kind of doctor. **Hyponyms:** Neurosurgeon is kind of surgeon.

**Synonyms:** {operating surgeon, sawbones}.

**Our common sense tells us:** Surgeons are delicate, skilled, accurate and careful. Supermodels are poised, skinny, lithe, pretty, and graceful.

How to find these common sense knowledge?

## Using Similes to Identify Stereotypical Cultural Associations

- **Similes / Comparisons reveal the most diagnostic features of a concept**

E.g., "as hot as the sun", "as dry as sand", "as wobbly as jelly", "as sweet as pie"

- **The most frequent similes characterize the most pivotal concepts / senses**

E.g., animal concepts ("lion", "rat", etc.) are frequently used in comparisons

- **Unlike metaphors, similes have a standard, recognizable syntactic frame**

"as barren as a desert", "as delicate as a surgeon", "as stiff as a corpse"

- **Detailed Knowledge-Representations can be gathered for individual concepts**

**Example:** surgeon = {delicate, sensitive, skilled, clinical, professional, ...}

## Sampling Comparisons/Similes from the WWW

**Query-pattern #1:** “*as ADJ as a|an \**” for all antonymous adjectives in WN

**Query-pattern #2:** “*as \* as a|an NOUN*” for all nouns gathered with query #1

- 200 sampled snippets per query, to give 74,704 apparent simile instances

42,618 unique simile types, linking 3769 adjectives to 9287 unique nouns

- **Major Issues:** Implicit/Local Context, Irony

*"as hairy as a bowling-ball", "as sober as a Kennedy"*

- **Annotation:**

*12,259 are bona-fide similes and 2796 are ironic similes*

## **Ironic Comparisons/Similes from the WWW**

### **Some Examples:**

As {welcome, painless, appealing, pleasant, exciting, entertaining} as a root-canal

As subtle as a {sledgehammer, freight\_train, anvil, axe, rhino, toilet\_seat, ...}

As hefty as a {laptop, croissant}

As blind as a {referee, hawk}

As {muscular, epicurean, smart, straight, sturdy, weighty, ...} as a paper\_clip

As rare as a {ham\_sandwich, toaster, traffic\_jam, monsoon, garbage\_pickup}

As {bulletproof, scary, subversive} as a sponge\_cake

As private as a {park\_bench, town\_hall, shopping\_mall}

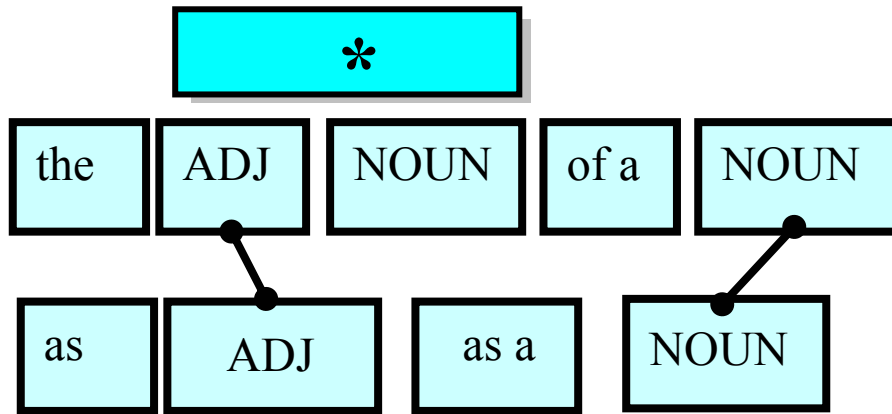

**2796 unique adj:noun ironic simile types.**

**936 adjectives to 1417 nouns.**

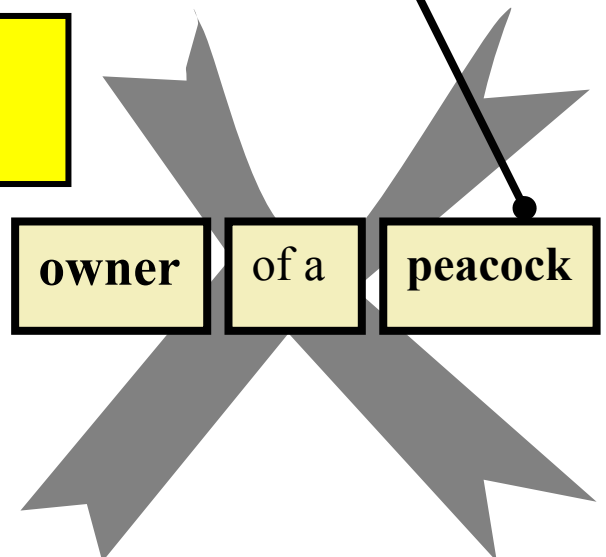

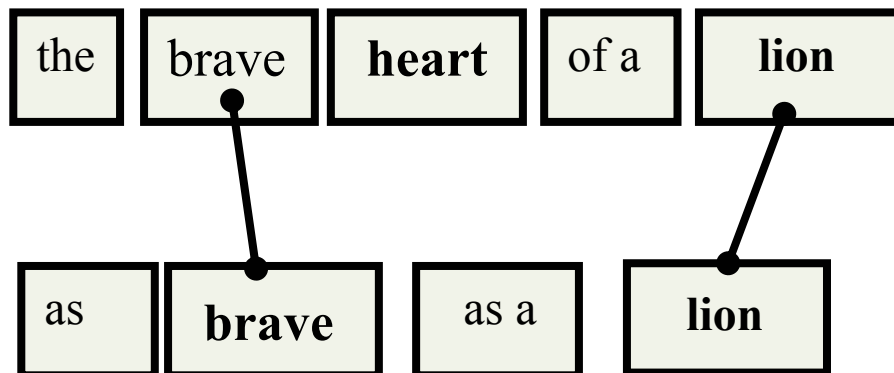

**13% of all annotated simile instances. 18% of unique simile types**

## Mining the Web for Conceptual Facets.

After word sense assignment, we have 18,794 facet:feature tuples with 2032 different WordNet noun senses.

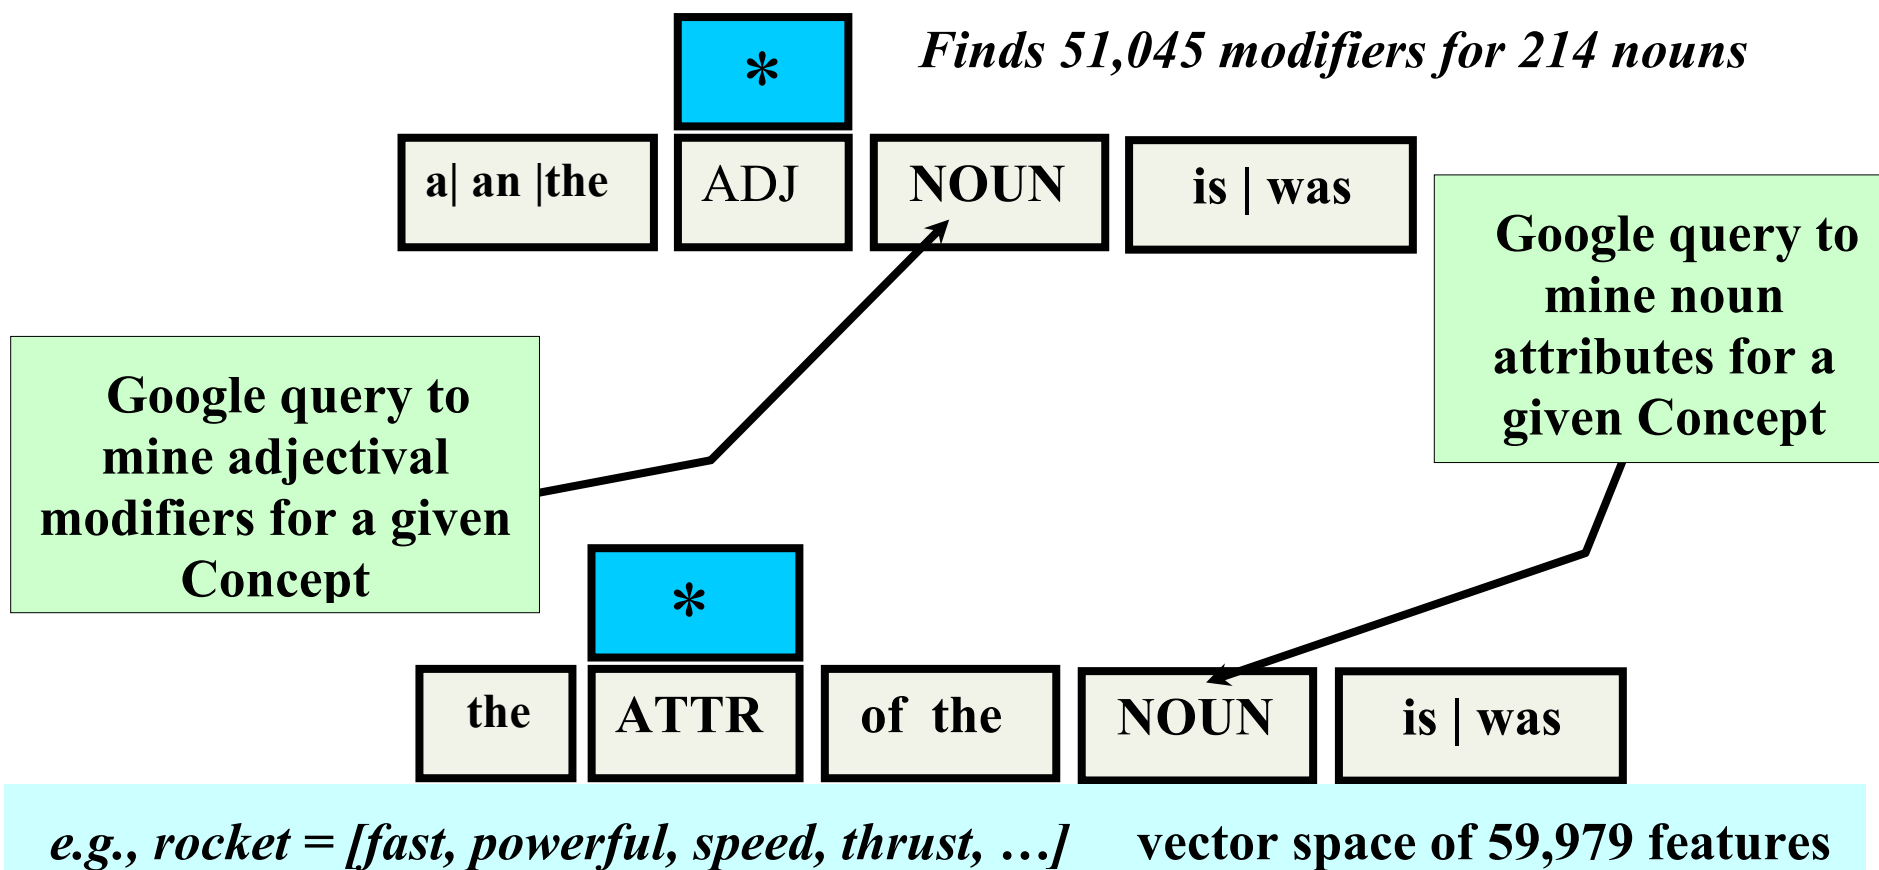

# Stereotypical Frames: Web-Derived Attribute-Value Pairings

## Emprirical Evaluation

Almuhareb & Poesio (2004, 2005): Web-Mining of Concept Modifiers/Attributes

## Almuhareb & Poesio (2004) / Veale & Hao (2007): Clustering Results

13-way clustering: [I2=9.58e+001] [214 of 214], Entropy: 0.133, Purity: 0.902

## Almuhareb & Poesio (2004, 2005) / Veale & Hao (2007, 2008): Total Comparasions of Clustering Results

**Table 1: Clustering accuracy for experiment 1 (214 nouns, 13 WordNet semantic classes).**

<i>Approach</i>	<i>Values only</i>	<i>Attr's only</i>	<i>All (V + A)</i>
Almu. + Poesio	71.96% (51045 vals)	64.02% (8934 attr)	<b>85.51%</b> (59979 v+a)
Naturalistic Descriptions	70.2% (2209 vals)	78.7% (4974 attr)	<b>90.2%</b> (7183 v+a)

**Table 2: Clustering accuracy for experiment 2 (402 nouns, 21 WordNet semantic classes).**

<i>Approach</i>	<i>Values only</i>	<i>Attr's only</i>	<i>All (V + A)</i>
Almu. + Poesio (no filtering)	56.7% (94989 vals)	65.7% (24178 attr)	<b>67.7%</b> (119167 v+a)
Almu. + Poesio (with filtering)	62.7% (51345 vals)	70.9% (12345 attr)	66.4% (63690 v+a)
Naturalistic Descriptions	64.3% (5547 vals)	54.7% (3952 attr)	<b>69.85%</b> (9499 v+a)

## Conclusions

- **Similes provide best clues to naturalistic descriptions of common concepts**

A large case-base of "natural" comparisons is easily acquired from the web

- **Useful for Metaphor/Simile Processing On-Line**

[Afflatus.ucd.ie/aristotle](http://Afflatus.ucd.ie/aristotle)

Generate metaphors for arbitrary target concepts that highlight given features

**Thanks**
