

# ANNOTATION AND ANALYSIS OF OVERLAPPING SPEECH IN POLITICAL INTERVIEWS

*Martine Adda-Decker, Claude Barras, Gilles Adda,  
Patrick Paroubek, Philippe Boula de Mareuil*

*LIMSI-CNRS Orsay FRANCE,*

*Benoît Habert*

*ICAR/ENS-LSH, Lyon FRANCE*

# TALK OUTLINE

- Framework
- Corpus
- Overlap segmentation
- Overlap tagset and annotation
- Analysis of overlapping speech
- Overlapping speech and disfluencies
- Conclusion and discussion

# FRAMEWORK

- Overlapping speech in TV political interviews
- Questions addressed:
  - How to segment and annotate overlapping speech?
  - Typology of overlapping speech in relation with its intrusive nature
  - Speaker roles in different overlap types
  - Link with disfluencies

# CORPUS

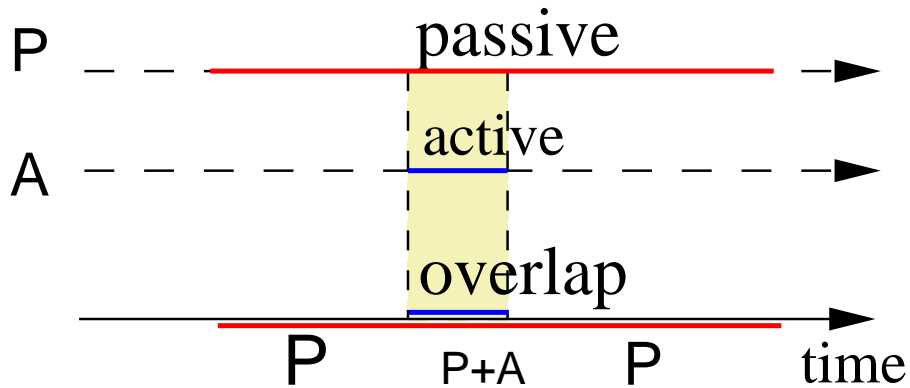

- 8 one-hour French TV shows
- 1 major figure (either politician or from civil society) interviewed by 3 journalists and 1 chairman
- Fine-grained transcriptions including discourse markers and disfluencies (filled pauses, repetitions, revisions)
- Overlaps transcribed using a customised version of TRANSCRIBER  
<http://trans.sourceforge.net/>

# OVERLAP SEGMENTATION

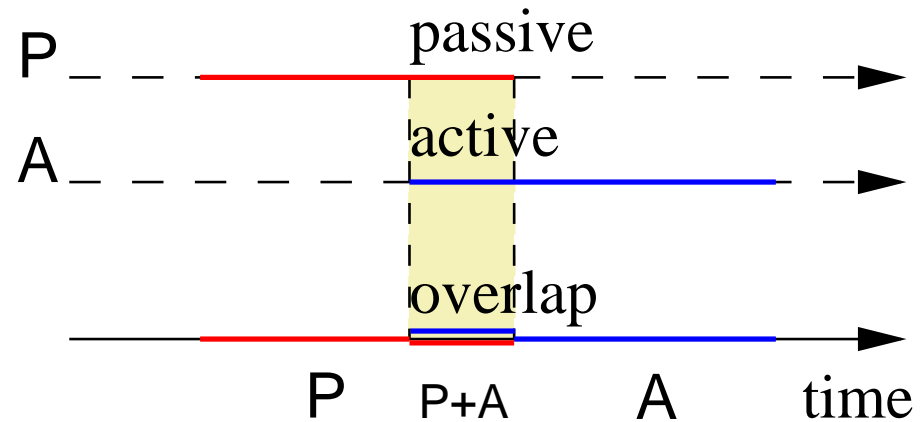

Two overlapping cases:

case ①: no speaker change; case ②: speaker change.

case ①

case ②

# OVERLAP SEGMENTATION

Overlap segmentation examples (cases ① and ②) in the customised Transcriber annotation editor

**Transcriber 1.5.2**

Fichier Edition Signal Segmentation Options Aide

Alain Duhamel  
 ● (/vous avez/) dû v() souvent souffrir , alors ?

Rony Brauman ①  
 ● non , non , non , (/au contraire /)(/duhamel: non/) non non , je me suis vraiment épanoui , j' adore ce que je fais , je l' ai toujours fait avec passion et j' ai pas vraiment souffert .

● écoutez il y a des (/moments durs vous pouvez pas./)

Alain Duhamel ②  
 ● (/alors c' était quoi ?/) la volonté de transformation /? déjà la lutte , ou la (/lutte contre/)(/brauman: non/c) l' injustice /? c' était quoi /?

# OVERLAP TAGSET AND ANNOTATION

Overlap tagset defined after an interactive process:

- good inter-annotator agreement
- mutually exclusive categories

4 overlap tags:

**bck** *backchannel*: “hmm”, the listener follows the speaker;

**cmp** *complementary*: the incoming speaker overlaps the main speaker but does not take the floor.

**tst** *turn stealing*: the incoming speaker clearly interrupts the main speaker;

**att** *anticipated turn taking*: the incoming speaker anticipates the end of the main speaker’s turn;

# OVERLAP TAGSET AND ANNOTATION

Examples of the different overlap types, producing case ① (**bck**, **cmp**) and case ② (**tst**, **att**) overlaps.

**bck**: *backchannel*

A: it is simply /the fact/ /B: hmm/ that...

**cmp**: *complementary*

A: I have a last question /about/ /B: very short/ about your...

**tst**: *turn stealing*

A: and in /this case.../

B: /I want to/ come back...

**att**: *anticipated turn taking*

A: and this leads to humanitarian /action?/

B: /well I/ think

# DISTRIBUTION OF SPEECH OVERLAPS PER TAG

## PASSIVE/ACTIVE ROLES

3-4 overlaps per minute including less than 5% of the words of the corpus

Overlap frequency (# segments per minute), word rate and mean length for passive (P) and active (A) roles, for **bck**, **cmp**, **tst** and **att**.

category		over. freq.	words %	mean length
non intrusive overlaps				
<b>bck</b>	P	1.2	0.8	1.6
	A		0.6	1.2
<b>att</b>	P	0.4	0.4	2.1
	A		0.5	2.3
intrusive overlaps				
<b>cmp</b>	P	0.7	1.1	3.4
	A		1.1	3.5
<b>tst</b>	P	1.1	1.7	3.3
	A		1.9	3.8

# ANALYSIS OF OVERLAPPING SPEECH ATTACK/RESIST RATIO

Attack/resist ratio  $R$

attack density  $D$

$$R = \frac{A - P}{A + P}$$

$$D = \left( \frac{100 \times A}{M + P + A} \right)$$

A = active zone of the speaker; P = passive; M = mono-speaker (in words)

set	$R$	$D$
<b>all</b>	<b>0.0</b>	<b>4.0</b>
<b>journalists</b>	<b>0.3</b>	<b>8.0</b>
<b>interviewees</b>	<b>-0.3</b>	<b>2.2</b>
<b>Chairman</b>	<b>0.2</b>	<b>6.6</b>

journalists	$R$	$D$
Journ1	0.3	10.8
Journ2	0.5	6.7
Journ3	0.1	4.3

interviewees	$R$	$D$
IntPF0	-0.1	2.4
IntPF1	0.0	3.6
IntPF2	-0.2	3.4
IntPF3	-0.6	1.0
IntCF1	-0.4	2.9
IntCF2	-0.7	1.2
IntPI1	-0.4	0.7
IntPI2	-0.1	2.3

# OVERLAPPING SPEECH AND DISFLUENCIES

Disfluency rates for the different segment types

**non-ov**: non overlapping speech

**over**: overlapping speech

**non-intr**: non-intrusive overlaps (**bck**, **att**)

**intr**: intrusive overlaps (**cmp**, **tst**)

# OVERLAPPING SPEECH AND DISFLUENCIES

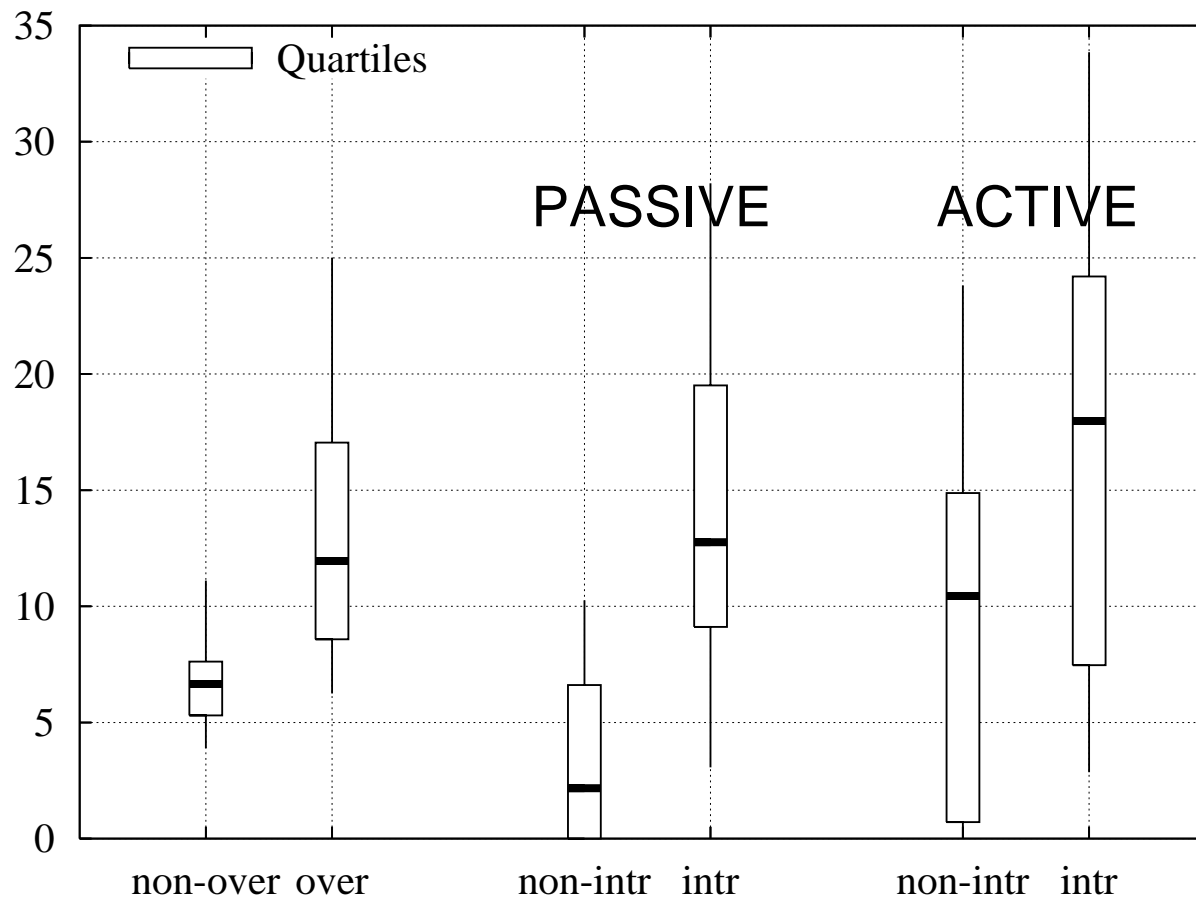

Disfluency rates for the different segment types

**non-ov**: non overlapping speech

**over**: overlapping speech

**non-intr**: non-intrusive overlaps (**bck**, **att**)

**intr**: intrusive overlaps (**cmp**, **tst**)

# OVERLAPPING SPEECH AND DISFLUENCIES

Disfluency rates for the different segment types

**non-ov**: non overlapping speech

**over**: overlapping speech

**non-intr**: non-intrusive overlaps (**bck**, **att**)

**intr**: intrusive overlaps (**cmp**, **tst**)

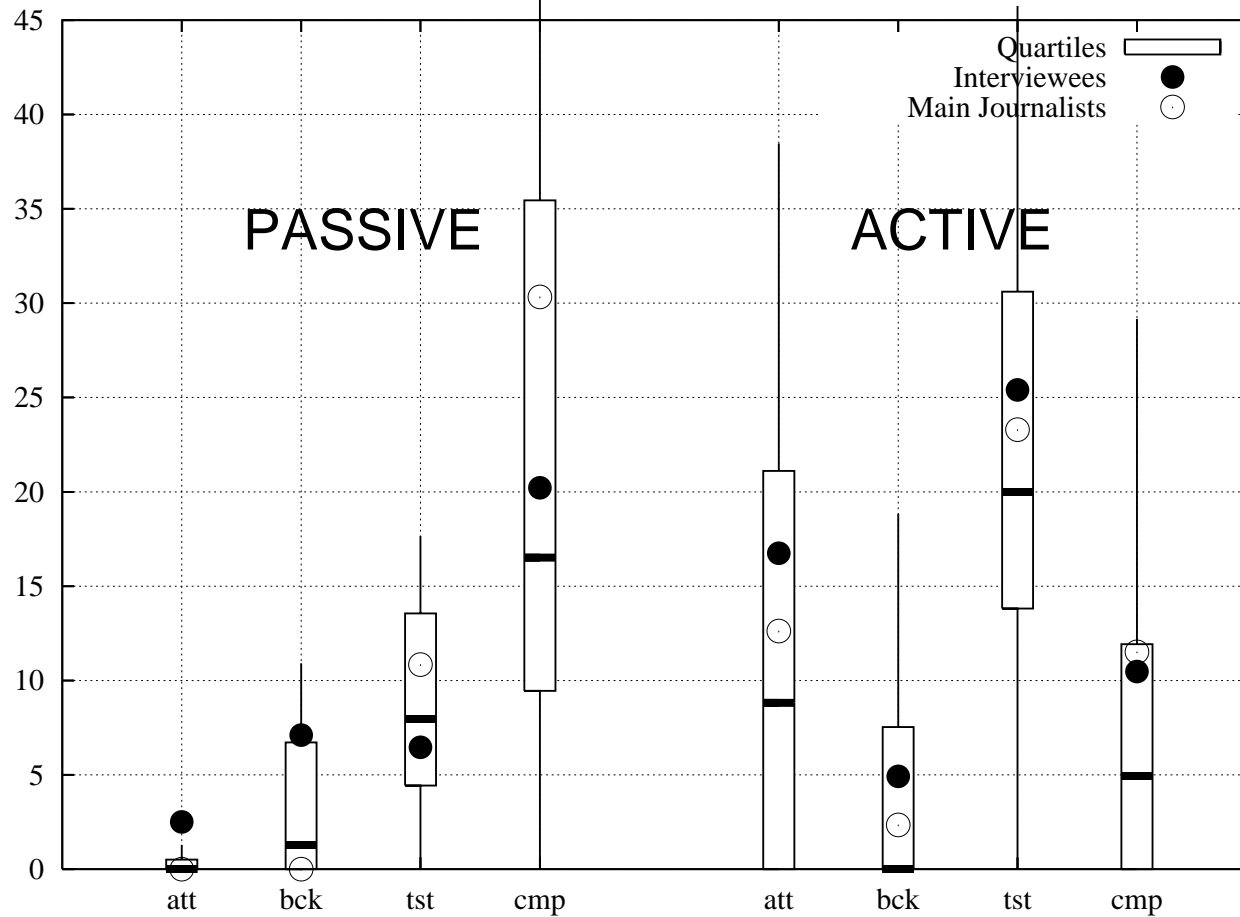

# CONCLUSION AND DISCUSSION

- Annotation of overlapping speech
  - annotation process which preserve the interaction structure
  - reduced tagset to simplify the annotation
  - enables the study of overlap/disfluencies/speaker role
- Overlapping speech and disfluencies
  - twice more disfluencies on overlaps
  - very high %disfluencies for passive speakers in *complementary* overlaps
  - lower %disfluencies on *backchannel* than on non-overlapping speech
- Speaker role and disfluencies
  - high %disfluencies for journalists in passive/intrusive situation

# OVERLAPPING SPEECH AND DISFLUENCIES

Disfluency rates for the different segment types

**bck**: *backchannel*; **cmp**: *complementary*; **tst**: *turn stealing*; **att**: *anticipated turn taking*

# ANNOTATORS' AGREEMENT

Overlap label distribution from 5 annotators (one show)

		annotator labels (%)			
label	count	bck	cmp	tst	att
<b>bck</b>	63	91.1	8.0	1.0	0.0
<b>cmp</b>	50	9.2	75.8	15.0	0.0
<b>tst</b>	107	0.4	3.6	89.2	6.8
<b>att</b>	26	0.0	0.0	<b>24.0</b>	76.0

Kappa inter-annotation agreement 0.7 - 0.8

# HOMOGENEOUS SPEECH REGIONS

## H-Region:

maximum length segment keeping homogeneous speaker characteristics

set	#H-regions	(%H-regions)	#words	(%words)	average length
<i>all</i>	4,000	(100)	83,000	(100)	20.7
<b>mono-speaker</b>	2,600	(65)	79,300	(95)	30.0
<b>overlap</b>	1,400	(35)	3,700	(5)	2.7

# OVERLAPPING SPEECH DISCOURSE MARKERS AND DISFLUENCIES

**DM:** discourse markers; **FP:** filled pauses; **RV:** revisions; **RP:** repetitions

category		%		% disfluencies		
		DM	FP	RV	RP	All
<b>mono-speaker</b>		2.4	2.0	2.5	2.5	6.9
<b>overlaps</b>	P	2.1	1.6	2.3	7.2	11.1
	A	5.9	0.5	3.0	11.0	14.5
<b>non-intrusive</b>	P	2.4	1.6	2.0	1.3	4.9
	A	7.2	0.6	0.9	5.2	6.7
<b>intrusive</b>	P	2.0	1.6	2.5	9.5	13.6
	A	5.4	0.4	3.8	13.0	17.2
